Collected Knowledge & Wisdom on

# Rick and Morty API

---

# Provides:

The Rick and Morty API provides data on various characters, locations, and episodes of the television show Rick and Morty.

## Key Provisioning:                                    **Pain factor** (*0=ezpz...5=nightmare*): **_0_**

- The Rick and Morty API is an open API, no authentication is required for use

## Quotas:

- There is a limit of 10,000 requests per day for a given IP address
- If the limit is reached, you will receive a 429 status (Too Many Requests) on all your requests during a period of 12 hours

---

## The Good:

- Does not require authentication such as an API key
- Paginated responses with up to 20 documents per page
- 3 endpoints for characters, locations, and episodes
- Thorough documentation for each endpoint
- Model schemas are explained in the documentation
- Helper libraries are available for various languages (including Python)
- Even if you don't read the documentation, it's pretty easy to figure out what the API gives you.

## The Bad:

- Quota of 10,000 requests per day for a given IP address

## The Ugly:

- Characters, Locations, and Episodes are all identified by ID only
